

## ***Benefit Accuracy Measurement Methodology and Program Description***

The Benefit Accuracy Measurement (BAM) program (before 1996 called Benefits Quality Control) is designed to determine the accuracy of paid and denied claims in three major Unemployment Insurance (UI) programs. It does this by reconstructing the UI claims process for samples of weekly payments and denied claims using data verified by trained investigators.

For claims that were overpaid, underpaid, or improperly denied, BAM determines the cause of and the party responsible for the error, the point in the UI claims process at which the error was detected, and actions taken by the agency and employers prior to the error. For erroneous paid claims, BAM determines the amount of benefits the claimant should have received.

The results of the BAM statistical samples are used to estimate accuracy rates for the populations of paid and denied claims. In addition, BAM is a diagnostic tool for Federal and State Workforce Agency (SWA) staff to use in identifying systemic errors and their causes and in correcting and tracking solutions to these problems. The BAM data is used in the [overpayment detection measure](#), which is a Core Measure for UI Performs (UI performance management system).

### ***Coverage***

BAM covers the three largest permanently authorized unemployment compensation (UC) programs: State UI, Unemployment Compensation for Federal Employees (UCFE), and Unemployment Compensation for Ex-Service Members (UCX). BAM data for paid claims are available for the 50 states, the District of Columbia, and Puerto Rico from January 1988 through the present. BAM Denied Claims Accuracy (DCA), which investigates the accuracy of denied UC claims, began in August 2001.

### ***Sample Design***

State BAM samples are randomly selected from the populations of UI, UCFE, and UCX payments and determinations denying eligibility issued by the state each week. BAM refers to this weekly sampling interval as a batch. Each batch begins at midnight Sunday and runs until 11:59 p.m. Saturday. BAM records the number of UI weeks and dollars that were paid in the population from which the sample was selected and the number of denied claims for DCA so that the sample data can be weighted to make inferences concerning the population.

### ***Sample Sizes***

Before 1997, BAM paid claims sample sizes ranged from 400 to 1800 cases per year per state. Since 1997, allocated sample sizes range from 360 cases per year in the 10 states with the smallest UI workloads to 480 cases in the remainder of the states. Several states have chosen to select larger samples. For DCA, states sample 150 cases for each of the three types of denials -- monetary, separation, and nonseparation.

### ***Database***

The BAM database includes about 110 data elements for each sampled payment or denial. Data for 15 of these elements are captured twice (before and after the investigation), and eight are completed

only for erroneous payments or denials. Aggregate data for each batch are collected for 42 additional data elements, most of which are demographic characteristics of the sample and population (Appendix A)

### **Methodology Considerations**

Estimates based on BAM data are subject to the usual sampling and non-sampling errors that can affect survey data. BAM has implemented several quality assurance procedures to minimize non-sampling errors, such as incomplete or improperly defined sampling frames, errors of interpretation and data entry errors. Nonresponse bias is not significant. Nationally, BAM program staffs gather sufficient information from claimants, employers and third parties to complete their investigations for over 99 percent of the UI payments that are sampled (response rates for DCA are somewhat lower); sample case completion rates are 100 percent in most states. When the program began, all BAM verifications were done in person. Since 1993, investigators may use telephone, mail, and fax to collect their data. Studies have shown that although such methods yield somewhat less information than in-person contacts, the overall accuracy rate estimates are not significantly affected.

<b>BAM Case Completion and Claimant Interview Method -- IPIA 2012</b>								
<b>Sample Type</b>	<b>Cases Sampled</b>	<b>Valid Cases *</b>	<b>Cases Completed **</b>	<b>Percent Complete</b>	<b>In-Person</b>	<b>Tele-Phone</b>	<b>Mail</b>	<b>No Clmnt. Inter.</b>
<b>Paid Claims</b>	24,826	24,845	24,783	99.98%	16.93%	39.52%	36.42%	7.12%
<b>Monetary</b>	9,089	8,256	8,225	99.62%	0.64%	50.56%	23.05%	25.75%
<b>Separation</b>	8,307	8,164	8,130	99.58%	0.58%	49.55%	23.64%	26.23%
<b>Nonseparation</b>	8,611	8,169	8,140	99.64%	0.54%	52.75%	26.22%	20.50%

\* Cases sampled minus cases deleted because they did not meet the definition for inclusion in the survey population and denied claims that were withdrawn by the claimant.

\*\*To meet IPIA reporting timetables, the database was frozen on 10/25/2012.

The attached excel spreadsheet provides state detail for the claimant interview methodology:

[Method Information obtained.xlsx](#)

To evaluate the accuracy of each sampled payment, the BAM program investigates the UI claimant's monetary and separation eligibility, as well as all information relevant to the compensated week of unemployment that was sampled, including the claimant's availability for work, efforts to find suitable work, and earnings from casual employment or other income sources, such as Social Security or pensions. Investigations of denied claims are limited to the issue for which eligibility was denied. For example, if a claimant was denied UC because of a voluntary quit separation issue, DCA will investigate only that issue, not the claimant's monetary or nonseparation eligibility. Both BAM paid and denied claims accuracy record demographic, UI program, and labor market data on each claimant. BAM does not maintain longitudinal data on the claimant's UI benefit history subsequent to the compensated week sampled.

Although claimant characteristics can be inferred from the data, it is important to keep in mind that the BAM paid claims sampling frames consist of payments. Claimants have an increased chance of selection to the BAM paid claims samples the longer they remain in the UI system and are paid benefits. Estimates of claimant characteristics that are correlated with duration of receiving benefits are subject to bias unless they are weighted to take into account the claimant's probability of sample selection.

## Payment Error Codes

Payment error codes are provided for both underpayments and overpayments; the codes provide for multiple actions taken for a single issue, multiple issues detected for a single case, and various extents of agreement or disagreement between BAM and other units in the UI system concerning official policy or actions taken for the sampled cases. The payment error coding system records findings of case investigations that reflect the state's law and official (written) policies. The BAM payment error coding system encompasses appealable actions taken by any state unit, including BAM, which modify actions taken on payment errors, e.g., monetary redeterminations, establishment of overpayments, etc. It encompasses actions in progress by units other than BAM on improper Key Week payments, of which actions BAM is in agreement. It also encompasses findings when no actions are permitted, e.g., because of state finality provisions.

## BAM Integrity Rate Definitions

The following charts summarize the definitions for the integrity rates included in the BAM analyses.

Rate	Sample Type	Action Code	Cause
Annual Report* *Rate shown with and without other SWA errors (e.g. interstate activities)	1 - Paid Claims	10 - Fraud 11 - Nonfraud recoverable 12 - Nonfraud nonrecoverable 13 - Technically proper due to finality rules 15 - Technically proper due to rules other than finality or formal warning rule	All cause codes.
Operational	1 - Paid Claims	10 - Fraud 11 - Nonfraud recoverable	100-119; 150-159 Benefit year earnings 120-149 Deductible Income 300-329 Separation 400-419 Able and available 430-439 Refusal of suitable work 440-449 Self-employment 450-459 Illegal alien status 470-479 Other eligibility issues 480-489 Identity theft 500-519 Dependents
Fraud	1 - Paid Claims	10 - Fraud	All cause codes.
Agency Responsibility* *Rate shown with and without other SWA errors (e.g. interstate activities)	1 - Paid Claims	10 - Fraud 11 - Nonfraud recoverable 12 - Nonfraud nonrecoverable 13 - Technically proper due to finality rules 15 - Technically proper due to rules other than finality or formal warning rule  Includes only those overpayments for which the agency had full or partial responsibility -- codes 30, 1030, 230, 34, 1230, 1034, 234, 1234.	All cause codes.

Rate	Sample Type	Action Code	Cause
Underpayment	1 - Paid Claims	BAM investigation determines that the payment was too small:  20 - Supplemental check issued/offset applied or increase in weekly benefit amount (WBA), dependents' allowance (DA) entitlement, maximum benefit amount (MBA), or remaining balance (RB) 21 - Technically proper due to finality rules 22 - Technically proper due to rules other than finality	All cause codes.

Denied Claims			
Rate	Sample Type	Action Code	Cause
Improperly Denied	2 - Monetary 3 - Separation 4 - Nonseparation	BAM investigation determines that the denial determination was improper or benefit payment was too small:  20 - Official agency action finds the claimant to be eligible for a supplemental check issued/offset applied or increase in WBA, DA, MBA, or RB 21 - Technically proper due to finality rules 22 - Technically proper due to rules other than finality 23 - Supplemental check issued/offset applied which was later officially reversed, revised, adjusted or modified, and BAM disagrees with the official action 24 - No payment is due to the claimant	For Action codes 20-23: All causes <u>except</u> 700 - 739.  For Action code 24:  710-719: Claimant not entitled to benefits due to other issues affecting the claim  720-729: Claimant not entitled to benefits because no week was claimed (Codes valid only for Sample Type 3 or 4)
Adjusted Improperly Denied	2 - Monetary 3 - Separation 4 - Nonseparation	Same as Improperly Denied <u>minus</u> :  Prior Agency Action codes 20-29: Agency was in the process of resolving issue and took correct action before DCA investigation completed or agency had correctly resolved issue prior to sample being selected  – or –  Results of Appeal of Initial Determination codes 1 - affirmed, eligible; or 3 - reversed, eligible	For Action codes 20-23: All causes <u>except</u> 700 - 739. For Action code 24:  710-719: Claimant not entitled to benefits due to other issues affecting the claim.  720-729: Claimant not entitled to benefits because no week was claimed (Codes valid only for Sample Type 3 or 4)

Denied Claims			
Rate	Sample Type	Action Code	Cause
Overpayment	3 - Separation 4 - Nonseparation	Action codes 10-16	All causes <u>except</u> 700 - 739.
Properly Denied	2 - Monetary 3 - Separation 4 - Nonseparation	Action Code 30	Cause codes 700-709

### ***Published Findings***

The Department of Labor has published BAM data by state along with supplementary analyses annually since 1988. From 1988 to 1995, the report was called the Unemployment Insurance Benefits Quality Control Annual Report; 1996 data were published in the UI Benefit Accuracy Measurement Annual Report. Since 1997 BAM data have been published as part of the UI PERFORMS Annual Report, which also includes data from the Benefit Timeliness and Quality program and the Tax Performance System. The BAM Analytical Report and UI Performs Annual Report are available on the U. S. Department of Labor Employment and Training Administration Office of Unemployment Insurance Web site – <http://oui.doleta.gov/unemploy/>.

<b>TOTAL AUDITED</b>						

## Database Description

### Naming Conventions

The DCA system utilizes the following naming conventions within the UI database:

- Each table will have a prefix of **b-dca-xxxx**. (The prefix's meaning is:
  - 'b-' = Benefits Accuracy Measurement and
  - 'dca-' = Denied Claims Accuracy.
- Each table will have the same base name as the BAM PCA accuracy tables.

The base names are:

<b>comparison</b>	The data characteristics table provides aggregate sample and population data for several demographic data elements.
<b>master</b>	The primary table that consists of base record information.
<b>errisu</b>	The error issue table contains information on the cause, responsibility, point of detection, and other data elements for improper denials.
<b>reopen</b>	The reopen table contains a record of any modification to a master record after the record has been closed by the supervisor.
<b>assigndate</b>	The assignment table contains the investigator's case assignment information with respect to his/her master record.

### Paid Tables

PAID CLAIMS ACCURACY TABLES	
Table Name	Table Type
b-comparison	Primary
b-master	Primary
b-errisu	Primary
b-assigndate	Primary
b-reopen	Primary

### Denials Tables

DENIED CLAIMS ACCURACY TABLES	
Table Name	Table Type
b-dca-comparison	Primary
b-dca-master	Primary
b-dca-errisu	Primary
b-dca-assigndate	Primary
b-dca-reopen	Primary

In addition to the five primary DCA tables, DCA utilizes additional tables also used by BAM paid claims accuracy software: **b-uaf**, **b-qcslo**, **b-batch**, **b-cre**, and **b-vallim**. The DCA software utilizes the **g-states** generic table as well.

### Primary Keys

FIELD	KEY	DEFINITION
batch	Primary	Batch identifies the year (YYYY) and week (WW) of the record. The format of the field is: YYYYWW.
seq	Primary	Primary Sequence Number identifies the record number within the batch by sample type.  Range of values: 1 - 99.  At least two (2) sample cases are required for each batch and sample type because of statistical validity requirements.
samptype	Primary	Sample Type identifies the specific record type within the batch.  1 - BAM paid claim 2 - Monetary denials 3 - Separation denials 4 - Nonmonetary nonseparation denials

Example: **batch** = 200003; **seq** = 3; **samptype** = 2 identifies the record as the third sampled monetary denied case within the third week of 2000.
